

SANCOM

SA-PAN034039-P46**3.4-3.9 GHz High Power GaN-HEMT**

Features

Frequency Range: 3.4-3.9 GHz

$P_{\text{sat}} \geq 46 \text{ dBm}$

Power Gain: $\geq 11 \text{ dB}$

Efficiency: $\geq 50\%$

$Z_{\text{in}}/Z_{\text{out}} = 50 \Omega$

Description

Sancom Electric's GaN-HEMT SA-PAN034039-P46 offers high power, high efficiency, ease of matching and greater consistency for high power applications with 28V operation. The SA-PAN034039-P46 typically provides 46 dBm of saturated output power and 11dB of large-signal gain and can be widely used in various RF/microwave systems.

Attention

- Please keep away from moisture during transportation and storage
- Pay attention to ESD prevention during chip use and assembly. Wear a grounding ESD bracelet.
- When adding electricity, add gate electricity first and then add leakage electricity
